MINUTES
El Dorado County Community Health Improvement Plan
Community Stakeholder Taskforce Meeting #1
January 19, 9:00 – 12:00

The meeting was kicked off by Supervisor Lori Parlin at 9 am. Participants introduced themselves and Interim Health and Human Services Director, Olivia Byron-Cooper reviewed the purpose of the taskforce to include overseeing the process, ensuring collaboration and communication with stakeholders and creating a road map to ensure all stakeholders are headed in the same direction in this important work. Note: complete side deck from the meeting is available here.

Colleen Bridger, from Colleen Bridger Consulting, then described the process used to consolidate data into the top 12 health issues for the County and the role the community played in identifying the top 3 health issues of Mental Health/Substance Use Disorder, Obesity/Overweight and Child Health.

Kathryn Jeanfreau, Epidemiologist with the Health Department presented data on each of the top three health issues with a focus on data available on the www.WellDorado.org website.

Colleen Bridger then introduced the root cause analysis process and matrix reflecting 11 different root causes that overlapped two or more of the selected health issues. She reviewed a root cause analysis prioritization index (see Figure #1) that factored in: 1) data availability; 2) evidence-based interventions and 3) Health Issues overlap for each root cause as one method to help participants select their priority root causes upon which the Community Health Improvement Plan will be built. Taskforce members were encouraged to consider other variables, including input from other members as they voted for their top 4 root causes.

Figure #1

Adverse Childhood Experiences	Adverse Community Events	Impulsivity	Low Self-Esteem	Poverty	Barriers to care	Discrimination	Poor diet	Lack of physical exercise	Peer Influences	Maternal Behaviors/factors

The root causes selected were 1) Pair of Aces (combining Adverse Childhood Experiences and Adverse Community Events); 2) Barriers to Care; 3) Peer Influences and 4) Maternal Behaviors/Factors

The group identified additional CHIP taskforce stakeholders working to address these root causes and designated who would follow up with each.

A survey will be sent to all CHIP Taskforce Stakeholders to identify where there are existing programs and services and where there are gaps.

The next CHIP meeting (scheduled for February 23) will review the results of that survey and clarify the gaps. The group will then identify which gaps they feel should be prioritized to be included in the CHIP. At the final CHIP meeting in March, the Taskforce Stakeholders will select evidence-based interventions that will form the work of the CHIP.
